TITLE : CONSUMER PACK FOR USE IN
FREEZING REFRIGERATION

ABSTRACT : PURPOSE: To make it possible to surely maintain the frozen state of fishes after the treatment thereof even during the time while cooling is interrupted such as during the transportation, storage, bringing-back of the fishes by surrounding a frozen food storing bag for fishes or the like by means of a water bag to freeze the water in the water bag.

CONSTITUTION: A pair of rectangular bags 1, 1', each of which is a water bag comprising plastic sheet material, are superposed on one another and three sides, excluding a bottom part 1a, 1a' of each of the bags 1, 1', are sealingly bonded to form a frozen food storing bag 2 therebetween. And a frozen food such as a fish body 3 wrapped after being treated in a fresh state is put into the bag 2 and thereafter water is filled into each of the bags 1, 1' through water holes 1c, 1c' and then a sealing treatment is applied thereto, and then the bags are frozen to obtain a frozen food packed with ice. The water filled into the bag expands while it is frozen and hence only the central part of the bag largely expands, therefore, partition walls are provided at predetermined intervals in each bag 1, 1' to eliminate such expansion.
